## Features

1

### Incorporates the next-generation high-performance F sensors for dramatically improved functionality and performance

- 3-year sensor warranty
  - \* Specific sensors excluded. Assumes the sensor is inspected at least once a year.
- Operating temperature range: -40 - +70 °C
  - \* Specific sensors excluded
- IEC/EN performance compliance scheduled
  - \* Specific sensors excluded
- Sensor degradation and life assessment function
  - The degradation and life assessment function notifies the user with a warning when the sensor needs to be replaced.

#### [Sensor degradation assessment]

The individual sensor principle characteristics are used to automatically diagnose sensor degradation (e.g., reduced zero point output and low electrolyte levels).

#### [Life assessment]

Diagnoses sensor life during calibration by predicting the sensor output reserve value based on past calibration history.

\* The sensor degradation and life assessment warning is output as a digital signal (HART or RS-485 communication).

### Compatible with a wide range of toxic gases

Devices in the SD-3EC Series lineup feature an intrinsically safe explosion-proof barrier integral construction (Flame-proof enclosure + intrinsically safe explosion-proof construction). This eliminates the need for sintered metal in the sensor and allows detection of a wide range of highly adsorptive toxic gases.

\* Compatible models: SD-3ECB, SD-3DEC, GD-3ECB  
For more information, refer to the F sensor list (with barrier).

### Double range capability (NC type)

Double ranges in the form of low concentration (ppm) and lower explosive limit (LEL) can be detected with a single device. This allows measurement of a wide range of concentrations with greater accuracy.

\* Not compatible with HART communication  
\* Not SIL compliant

2

### Wide range of output options

The SD-3 Series also supports Modbus (RS-485) communication in addition to 4 - 20 mA output with HART (support planned). Three relay contacts are also available (ALARM1, ALARM2, and FAULT). Select any of the following three types to suit specific uses:

- ① 4 - 20 mA signal with HART communication [standard]
- ② 4 - 20 mA signal with HART communication + contact (3c) [optional]
- ③ 4 - 20 mA signal + Modbus (RS-485) communication [optional; future support planned]

3

### Wide range of types to suit a variety of uses and installation environments

The SD-3 Series lineup includes diffusion type, suction type, remote type, and duct insertion type models. Select the optimal detection method to suit specific uses. Using a suction type model in conjunction with an external pump allows use in limited installation space and high places where maintenance work is not possible.

#### [Remote type/Duct insertion type]

Use a remote sensor to allow sensor installation up to 20 m from the detector main unit. An optional duct mount kit (sold separately) can be used for insertion inside a duct.

[Diffusion type] [Suction type] [Remote type]

[Duct insertion type]
